

## **Information Security Standards ISO 27001:2005**

ISO 27001:2005 is a standard setting out the requirements for an Information Security Management System. It helps identify, manage and minimize the range of risks to which information is regularly subjected. Newgen was certified on ISO 27001: 2005 standard in the year 2007, only to ensure that the already existing Newgen Information Security Management System complies with the standard requirements.

### **How does it benefit our customers?**

- Customers are assured by ensuring that all the information is safe
- Increased business efficiency
- Effective Management, fulfillment of regulatory and legal obligation for Information Security
