

IGCAR Automates Processes with DMS

IGCAR Automates Processes with DMS

NWC News Network, July 02 2007, 1130 hrs

Indira Gandhi Center for Atomic Research (IGCAR) has deployed document management solution (DMS) to automate processes.

It has chosen **Newgen Software Technologies** for the project.

Diwakar Nigam, managing director, **Newgen Software Technologies** said, "We are glad to announce this implementation at Indira Gandhi Center for Atomic Research, one of the most prestigious establishments in the country. The implementation required empowering the organization with an enterprise document management platform for creating, capturing, managing, sharing, delivering and archiving large volumes of documents. Our solution, based on OmniDocs, has enabled the company to streamline document-centric business processes, leading to better productivity and faster decision making in the organization".

"IGCAR was facing problems that were related to the conversion of printed documents into electronic form. **Newgen's** solution provides flexible interfaces to scan, publish and share documents. **Newgen** not only implemented its solution effectively but also consistently undertook extra efforts to assist us during the entire project lifecycle. We appreciate this special partnership and look forward to a long term business relationship with the company," he added.
